

The calcium score is 0 . This score is consistent with minimal coronary artery atherosclerotic plaque burden. On a population basis, this score places the patient in the lowest possible percentile rank for age, race and gender according to the MESA cohort.

Dominance

The circulation is right dominant .

Left main coronary artery

The LMCA arises from the left coronary sinus of Valsalva in the usual position. It divides into left anterior descending and circumflex vessels. It appears normal.

Left anterior descending artery

The LAD is a large calibre artery and gives rise to one main diagonal branch. The main vessel and its major diagonal branch appear normal.

Circumflex artery

The main circumflex artery and its obtuse marginal branches appear normal.

Right coronary artery

The RCA is a medium calibre vessel which arises from the right coronary sinus of Valsalva in the usual position and gives rise to posterior descending and posterolateral branches. The main vessel and its distal branches appear normal.

ADDITIONAL CARDIAC FINDINGS

The cardiac chambers, myocardium, pericardium and scanned segments of the thoracic aorta appear normal.

OTHER FINDINGS

There is a moderate hiatus hernia.

The lungs appear clear.

CONCLUSION:

The epicardial coronary arteries appear normal by CT angiography. There are no additional cardiac findings of relevance within the scanned segments.

Thank you for referring this patient.

EXAM: CT CORONARY ANGIOGRAM AND CALCIUM SCORE

CLINICAL DETAILS:

Recent presentation with ECG and troponin negative chest pain Risk factors for coronary artery disease: - Nil identified.

TECHNICAL PARAMETERS:

Single phase CT coronary angiography was performed using prospective ECG gating at 120 kVp. The total radiation dose (DLP) including scout, non contrast and contrast acquisitions was 225 mGycm⁻¹. Medication administered in the department: 50 mg oral metoprolol. 800 mcg nitrates. Intravenous iodine contrast volume: 90 mL. Data acquisition was at an average heart rate of 59 bpm. Image quality was good with minor motion and registration artefact present. .

FINDINGS:

CORONARY ARTERIES
