

*RCA:*

The right coronary artery arises from the right coronary sinus and gives rise to a sinoatrial branch and small acute marginal branches before terminating as posterior descending artery. The RCA appears normal.

*Ramus Intermedius:* None.

***(Minimal 0%-25%, Mild 25%-50%, Moderate 50%-70%, Severe >70%)***

**Cardiac findings:**

<i>Cardiac Chambers:</i>	Normal.
<i>Cardiac Valves:</i>	Normal.
<i>Pericardium:</i>	Normal.
<i>Aorta:</i>	Normal.
<i>Pulmonary Arteries:</i>	Normal.

**Other findings:**

There is linear atelectasis at the lung bases. The pleural spaces are clear. The visualised chest wall and mediastinum appears normal.

There are two low density lesions in the right lobe of the liver superiorly measuring 13 mm and 4 mm, consistent with cysts. The visualised upper abdomen otherwise appears normal.

The visualised osseous structures appear normal.

**Conclusion:**

There are small foci of non-calcified plaque in the proximal and mid segments of the LAD resulting in minimal (<25%) stenosis.
